▲ Evinrude E-TEC 115hp

▲ Evinrude E-TEC 25hp

Evinrude, a subsidiary of Canada-based BRP Inc., is the only outboard manufacturer in Australia to receive environmental certification for its entire two-stroke E-TEC engine range.

It has done this by adding the same Direct Injection technology that almost every major car manufacturer includes as part of their engine. Direct Injection introduces a precise amount of fuel into the combustion chamber to ensure no excess fuel is released into the environment. This is the secret to the Evinrude E-TEC and why it is more fuel efficient, produces the least emissions than any other technology and creates more power. With an Evinrude E-TEC G2, you'll spend a lot less at the pump because you'll burn up to 15% less fuel than the leading four-stroke. That means more money in your pocket and more

time on the water.

2-stroke engines have more torque than 4-stroke counterparts, it is a simple fact that everyone knows. With up to 30% more torque than any competitive four-stroke outboard, the Evinrude® E-TEC® G2® delivers the most torque in its class. That's the power of direct injection two-stroke technology.

The poster child of Evinrude's range is the 'G2', a narrow-banked V6-based that runs from a 2.7-litre 150hp to 3.4-litre 300hp. Evinrude's mid-range G1 comes in two designs, an inline three-cylinder which covers 25hp to 90hp and a V4 which boasts a 1.7L 115hp and 130hp. To round out the range, there are two Jet models, a 60hp 1.3-litre three-cylinder and 105hp narrow bank V6 and four lightweight 'Portable' engines from 3.5hp to 105hp.

For the thrill seekers, Evinrude builds an HO series of high-performance engines that range from a 60hp 1.3-litre three-cylinder and 1.7-litre V4, and right up to a 250hp 3.4-litre V6.

The new Evinrude portable 4 strokes have a lot to offer anyone looking for the best small engines available. From an integral fuel tank to a flow thru prop for quiet running, these portables have everything need to make adventures on the water more enjoyable.
